# FIREFLY II Series

## BACK

Injection molded nylon back, contoured for support. Optional mesh or upholstered back provides a comfortable sit in any environment.

## ARMS

Injection molded nylon arms for comfort and durability. Optional polished chrome arms.

## WATERFALL SEAT DESIGN

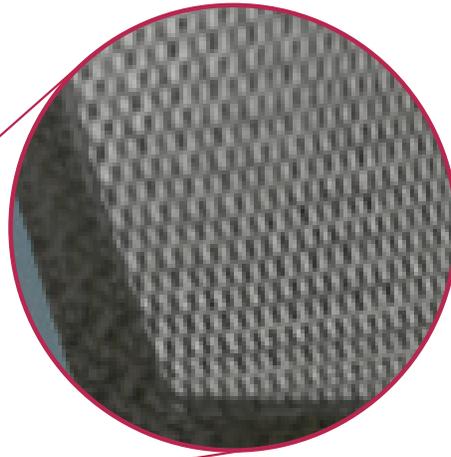

To reduce muscle fatigue. Optional upholstered seat for added support.

## FRAME

No fuss, sturdy steel frame finished in epoxy black powder coat paint with sloping legs on front and rear for stability. Chair can be stacked 6 high free-standing or 10 on a dolly.

## GLIDES

Nylon black glides. Optional carpet or hard surface casters available

## ABLEX™ MESH

This translucent weave pattern offers tremendous tensile strength; resulting in superior lumbar support and side-to-side torso flex movement.

The monofilament rubberized coating on the polyester mesh enables its “bounce back” memory. Air flows freely through this mesh to offer added comfort in any environment. Nightingale attaches **ABLEX™** mesh to the frame to provide the chair with a pre-set tension.

**ABLEX™** responds to the weight and shape of each user to deliver the exact amount of tension required to provide generous lumbar support while allowing for dynamic movement.
